

Matte Clear Polyester Overlaminating Film 7732FL

Product Data Sheet

Updated : July 2000 Supersedes : July 1995

Description:

- Premium overlaminate performance for extreme environmental conditions.
- Superior abrasion, humidity and solvent resistance.
- exposure resistant for extended periods of time.
- Premium clarity films will not impart haze on underlying graphics.
- "Hi-Tack" Acrylic Adhesive offers premium adhesive performance to a wide variety of surfaces.
- Specifically designed for high-speed, continuous-web rotary press lamination.
- High-bond strength resists edge lifting.
- Film liner offers superior graphic appearance for metalised or darker colours.
- 3M brand Overlaminating Films are Underwriters' Laboratories Recognised (File MH11410).

Physical Properties Not for specification purposes (Calipers are nominal values)

Facestock25 microns (1.0 thou) Matt Clear PolyesterAdhesive20 microns (0.8 thou) #400 Hi-Tack AcrylicLiner38 microns (1.5 thou) Clear Polyester

Shelf Life

12 months from receipt of material when properly stored at 22°C & 50 % Relative Humidity

Physical Properties Not for specification purposes

Adhesion 180° Peel (ASTM D3330)

100 Feet (ASTN D3330)				
Surface	Initial 10 min. dwell		Conditioned for 3 days at

	2.3 m / min	11	
	7.6 m / min	12	

Date: July 2000 Matte Clear Polyester

Overlaminating Film 7732FL

Environmental Performance

The properties defined are based on four-hour immersions at room temperature, unless otherwise noted. Samples were applied to stainless steel 24 hours prior to immersions and were evaluated one hour after removal.

Chemical Resistance

Chemical Appearance
Isopropyl Alcohol No Change
Detergent No Change
Engine Oil at 121°C (250°F) No Change
Water for 48 hours No Change

Temperature Resistance 149°C (300°F) for 24 hours -40°C (40°F) for 24 hours

Slightly yellowing No Change noted

Humidity Resistance

24 hours at 38°C (100°F) at 100% relative humidity Slight Change, Cloudy

Applications

Protective overlaminate for label and nameplate graphics can be used on appliances, industrial equipment, tools etc.

Graphics requiring a high-gloss or matt appearance.

Processing

Printing:

Die Cutting:

Facestock are not print treated. Liner backside has anti-block coating which makes it difficult to achieve good ink anchorage when printing on back of liner. Call Customer Service for recommendations.

Rotary or flat-bed after lamination.

Special Considerations

For maximum bond strength, surface should be thoroughly cleaned and dried. A typical cleaning solvent is heptane or isopropyl alcohol.

CAUTION: Follow manufacturer's instructions when using solvents.

For best bonding conditions, application surface should be at room temperature or slightly higher. Low temperature surfaces, below 10°C (50°F), cause the adhesive to become firm and will not allow the adhesive to flow and develop intimate contact with the substrate.

Higher initial bonds are achieved through increased rub down pressure. Use maximum laminating pressure for best results.
